Just remembered my Items need categories. Also colours.

How to tag them with multiple categories?

https://stackoverflow.com/questions/11231544/check-if-value-exists-in-postgres-array

SELECT value_variable = ANY ('{1,2,3}'::int[])

https://www.postgresql.org/docs/9.1/arrays.html

Trouble getting the array to save into the database.

OK. This is taking too long. I will try to add multiple categories later.

Going on with single categories for now.

UPDATE.

I can save the array as a string. Deal with getting the values back out later :)

Doesn't work.

Weirdly, the array will save with one value as a variable but not two. Very annoying.

Given up on the array idea to solve this many-many relation with a join table.
